Data Catalog – Gold Layer

Gold Layer will consist of business ready data which will be useful analytics and other use cases. It will consists of dimension and facts table.

1. gold.dim_customers

Purpose: Stores customer details along with the demographical and geographical data

Column Name	Datatype	Description
customer_key	BIGINT	Surrogate key uniquely identifies each record in the dimension table
customer_id	INT	Unique number assigned to each customer
customer_number	NVARCHAR(20)	Alphanumeric identifier representing the customer
first_name	NVARCHAR(25)	Customer first name as per the system record
last_name	NVARCHAR(25)	Customer last name or family name
country	NVARCHAR(50)	Customer residing country as per the system record
martial_status	NVARCHAR(15)	Customer Martial Status (E.g. 'Single', 'Married')
gender	NVARCHAR(10)	Customer Gender (E.g. 'Male', 'Female', 'NA')
birth_date	DATE	Customer birth date formatted as YYYY-MM-DD (E.g. 2000-12-01)
create_date	DATE	Customer record created date, formatted as YYYY-MM-DD

2. gold.dim_products

Purpose: Provides information about the products and their attributes.

Column Name	Datatype	Description
product_key	BIGINT	Surrogate key uniquely identifies each record in the dimension table
product_id	INTEGER	Unique identifier assigned to each product
product_number	NVARCHAR(20)	Alphanumeric identifier representing the product
product_name	NVARCHAR(50)	Descriptive name for the product
category_id	NVARCHAR(10)	Unique identifier for product category
category	NVARCHAR(30)	Broader classification of products. E.g. Bike, Car, Truck are categories will come under product Vehicle
subcategory	NVARCHAR(50)	More detailed classification for the product
maintenance	NVARCHAR(5)	Indicates whether product need maintenance or not
cost	INTEGER	Indicates the base price of the product
product_line	NVARCHAR(15)	Specific product line or series to which the product will belong
start_date	DATE	Date when product is available for sales

3. gold.fact_sales

Purpose: Provide information about the transactional sales data along with the surrogate keys from dimension table.

Column Name	Datatype	Description
order_number	NVARCHAR(30)	Unique alphanumeric code for each order
product_key	BIGINT	Surrogate key linking the order to product dimension table
customer_key	BIGINT	Surrogate key linking the order to customer dimension table
order_date	DATE	Date when order is placed
shipping_date	DATE	Date when order is shipped to customer
due_date	DATE	Payment due date for order
Sales_amount	BIGINT	Final amount(value) of the sale in the line
quantity	INTEGER	Number of units of products ordered in the line
price	INTEGER	Price per unit of product in the line
